Tuesday January 10, 2023

INTRODUCTION

Overview: Usage

The big picture for operation.

Overview: Deployment

The big picture for deployment.

Outline

A high level overview of the learning path is as follows:

- Prerequisites
- Github setup.
- Set up a development environment.
- Review the Python source for the bot.
- Configure Terraform and deploy the bot.
- Test it out.
- Explore possibilities for extending the functionality.

PRE-WORK

Setup: VSCode

VSCode (<https://code.visualstudio.com>)

- Windows 64 bit User Installer: VSCodeUserSetup-x64-1.73.1.exe
- Mac Universal: VSCode-darwin-universal.zip
- Linux (Debian, Ubuntu): code_1.73.1-1667967334_amd64.deb
- Linux (Red Hat, Fedora, SUSE): code-1.73.1-1667967421.el7.x86_64.rpm

Click this link for details on using dev containers in VSCode

Setup: git

GIT (<https://git-scm.com/downloads>)

- Windows 32 Bit: Git-2.38.1-64-bit.exe
- Windows 64 Bit: Git-2.38.1-32-bit.exe
- Mac: git-2.15.0-intel-universal-mavericks.dmg

Setup: Docker Desktop

Docker Desktop (<https://www.docker.com/>)

- Windows: Docker Desktop Installer.exe
- MacOS (Intel Chip): Docker.dmg
- MacOS (M1 Chip): Docker.dmg
- Linux instructions can be found: [here](#)

Click [here](#) to see Docker setup steps from Microsoft

Setup: Clone and Open the Project Repository

- Time to clone the repository.
- Click this link for the Github repository
- In VSCode, press F1 and enter the command “Dev Containers: Open Folder in Container”
 - You can also choose “Dev Containers: Open Workspace in Container”
 - Here is the Microsoft VSCode dev containers tutorial
- From the top menu select “Terminal – New Terminal”

PYTHON

TERRAFORM

EXTRA

Extra: Connect it to your GKE cluster

I can demo this or we can try it if we have time.

Future: Scan the PR comments for commands

The Cloud Function could monitor the PR for certain strings, using these to trigger actions.
