Abstract

Did you ever wonder how the cool kids get their bots going to manage pull requests in Github? The bots that can comment on Pull Requests, label things, perform other actions that are helpful to human developers? Well so did I, so I assembled one a while back that I want to share with you.

1 Build a Serverless Github Bot in GCP

This lab is meant to be a fun way to learn more about some modern software development technologies.

1.

2 Terraform

3 Python
